

REASONS TO GARDEN

You can make new friends – Diverse gardeners come together, information is shared, relationships develop, and people feel connected to the larger community of gardeners.

It can improve the way neighborhoods look – When vacant lots are replaced with gardens of fruits, flowers and vegetables, the area looks improved, maintained, and occupied.

It's good for your health —Constant supplies of fresh produce are great for your diet. Gardening is also great exercise and working outside in the fresh air can be a great stress reliever.

It increases biodiversity – People planting heirloom vegetables and fruits and experimenting with non-indigenous plants help to increase biodiversity.

It teaches about water conservation – Many Greeley community gardens use drip irrigation, which is a highly efficient watering system that significantly reduces runoff and evaporation.

You get to see birds and other wildlife – Bird sightings to date include robins, meadowlarks, doves, kingbirds, black birds, and occasionally owls. You see rabbits and groundhogs, too!

It produces food locally —Knowing that what you serve your family was not produced with chemicals and did not travel cross-country or around the world to get to your table is a good thing!

You can supplement your income —With climbing gas and food prices, who doesn't need a few extra bucks every now and then? Growing your own produce can slash grocery bills.

It helps build community — Religious groups, schools, non-profits, and similar community groups are always looking for projects--community gardening is a great way to get involved!

Water System: individual water

connection, gardeners can hook up their own drip systems. Cost: \$25 per plot

On-site Composting: yes

Deb DeBoutez, City of Greeley, 970-336-4167 deborah.deboutez@greeleygov.com http://greeleygov.com/services/neighborhood-resource-office

10th Street & 39th Avenue

Established, 2008

This garden has nine plots and is irrigated by ditch water, just like in historic Union Colony days. The farm and garden were given to the city's museum as a memorial to the foresight and determination of the C.O. Plumb family, and is recognized as one of Colorado's Centennial Farms. Most gardeners have a drip irrigation system in place.

Overall size: 3,200 sq. ft. Plot size: 15'x 20' Type: rows Open to the Public: yes *Organic: yes* Water System: individual water connection, gardeners can hook up their own drip systems. Cost: \$25 per plot On-site Composting: yes

1331 8th Ave Established, 2013

The community garden at Connections for Independent Living serves the disabled community of Northern Colorado. The garden provides a holistic approach to problems such as isolation, depression, low self-esteem, and extreme poverty.

The garden creates a community of peer gardeners, engenders a sense of accountability and accomplishment, and provides opportunities for outdoor activity and exercise.

WEST GREELEY

3251 West 22nd Street Established, 2010

This garden is situated in a beautiful setting next to Sanborn Park. Its plots are separated by 3-4' paths. Most gardeners raise vegetables or a mix of vegetables and flowers. Fences or other structures may be added to the gardeners' plot but must be removed at the end of the growing season. The whole garden is tilled each spring by the garden coordinator and is usually ready to plant by March 1.

Overall size: 7,570 sq. ft. Plot size: 20'x 25' Type: rows Open to the Public: yes Organic: yes Water System: yes Cost: \$25 per plot On-site Composting: no

Family of Christ Presbyterian Church 2414 35th Avenue

Established, 2013

Overall Size: 4 Acres

Ubuntu hosts gatherings each Wednesday to eat, grow, and work together. Gardeners are strongly encouraged to attend these weekly events. Each gardener tends two 5' x 15' plots and also contributes to the upkeep of common areas. Shared projects include a jubilee garden (to support food insecure families), a melon/squash patch, a cut flower garden, an herb garden, a xeriscape demonstration garden, and (someday soon) a community orchard. The richness of Ubuntu comes from being a multi-cultural, multi-lingual, multi-racial, multi-religious group of gardeners that values the unique contributions of each member of the community.

Plot Size: 10'x 15' Type: raised beds *Open to the Public: yes* Organic: yes Water System: drip, spigot system

Cost: \$30/plot, sponsorships available On-site Composting: yes
